Editor's note

To help you increase your competitiveness, **SAMES KREMLIN** dedicates itself daily to excellence in terms of innovation and reliability.

We are constantly improving our performances as well as quality to meet your specific needs.

We also help you define the equipment allowing your installation to comply with V.O.C. directives and industry standards.

We enable you to benefit from reliable technologies while ensuring you a swift return on investment.

In this catalog, you will find the equipment that will enable you to reach the paint application results you are targeting and the finish quality you desire.

Our mission is to provide you with the best equipment to meet your needs and requirements.

The entire team at **SAMES KREMLIN** is at your disposal to answer your questions.

Enjoy your reading.

Powder Know-how

A strong identity at your disposal

In over 70 years of experiences, **SAMES KREMLIN** has built up a unique know-how in many different fields of activity.

Numerous installations such as car manufacturing, tier 1&2 and many other industrials markets are equipped with our electrostatic solutions.

This know-how is for you the guarantee that we are experienced team members, able to understand your needs and to speak the same language. It is also the guarantee for you to work with technicians that are able to lead you towards the best technical alternative and to offer you a reliable solution. You surely can rely on **SAMES KREMLIN** to enable you to reach your efficiency goals in a sustainable manner.

Improving your competitiveness and making your investments cost-effective is our commitment.

Our strength: a real and strong collaboration with our worldwide customers, to answer various and complex requirements.

SAMES KREMLIN is the only world-class powder electrostatic equipment manufacturer offering the whole range of solutions such as:

📀 Premium Quality

📀 Competitivity

High Transfer Efficiency, Productivity increase, Reduced maintenance operations Reliability, TCO⁽¹⁾ reduced

Monday to Friday: 8:30 - 12:00 am & 13:00 - 17:30 pm

> AUDIT

In order to make the most from yourinstallation, paint or powder, advice and expertise of specialists are essential. Made of practical, experienced members, **SAMES KREMLIN** customer support team will carry out a diagnostic of your installation and will provide you with a worthy technical assistance for the improvement or retrofit of your paint line.

> REPAIR

A regular, and carried out professionally, maintenance or a retrofit of your equipment, is the best way to guaranty the correct running of your equipment. To this end, do not hesitate to contact one of our technicians:

• to get technical advice or technical assistance by phone

 to get one of your product repaired or controlled

to carry out a retrofit

Original spare parts guaranty the correct running of your equipment. We are here to deal with all your orders of spare parts throughout the world. Thus, our aim is to rapidly supply you and at the best price, with the wished part in order to guaranty an optimum and prolonged running of your paint or powder application equipment.

> TRAINING

SAMES KREMLIN is registered as a training centre by the French Ministry of Employment. Training sessions that allow you learning the requisite knowledge to the use and the maintenance of your equipment are organised throughout the year. A catalogue can be obtained upon request. You will be then able to choose among the proposed selection of training courses, the type of training that meets your needs or production aims. These training sessions can be organised within your premises or in our training centre located in our headquarters in Meylan - FRANCE.

Powder Know-how

Quality assurance

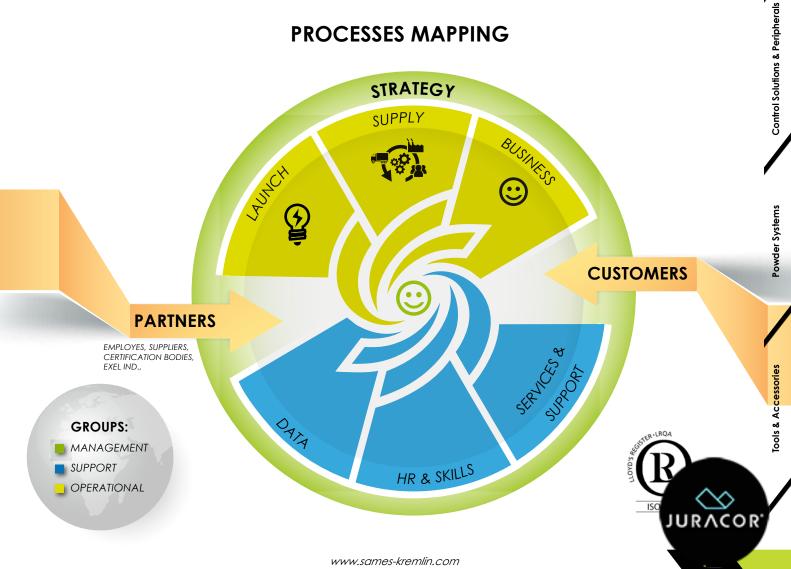

In conformity with the ISO9001 standard - issue 2008, the requisite procedures and registrations are mastered. The seriousness with which SAMES KREMLIN's quality policy is dealt ensures you an optimum quality at each stage of the production and of the assembly of the components.

Our products are in the scope of the following European directives:

- 2014/34/UE **Explosive Atmospheres**
- 2006/42/CE Machinery
- 2014/35/UE Low Voltage
- Electromagnetic Compatibility • 2014/30/UE
- 2011/65/UE RoHS Restriction of Hazardous Substances in electrical and electronic equipment
- 2012/19/UE WEEE Waste of Electrical and Electronic Equipment
- 1907/2006/CE REACH Registration, Evaluation, Authorization and Restriction of Chemicals.

A process mapping allows organizing all the stages while being very attentive to the various environments (customers, competition...), to the audits (inner and outer) and to the indicators linked to the defined aims.

Powder Know-how

Powder solutions

Whichever your process may be, there is always a well proven painting solution to carry out your application:

- Manual
- Automatic
- Robotic
- Quick color change

In close collaboration with our technical teams, a solution will be worked out to meet your requirements; our range allowing equipping any type of facility.

Research & Innovation

SAMES KREMLIN' main activity is to increase the productivity of its customers by designing and manufacturing innovative electrostatic systems. Launching new products into the market is the core of our organization. Our know-how, our large investment in Research & Development as well as our reliability-proven equipment allow proposing our customers integrate solutions.

E

SAMES KREMLIN has been integrating its own technology for decades all around the world. Your efficiency is leading our solutions:

Improve excellent finishing quality:

- provides uniform film build
- provides repeatable even coating thickness

Increase transfer efficiency:

- saves on powder
- reduces booth residues

Provide superior wrap:

- reduces application time
- reduces the number of applicators required

Reduce the operating costs of coating and increase production capacity

CUSTOMER SERVICE

Engineering partnership

The **SAMES KREMLIN** engineering teams share with our customers the fruit of their experience and bring all of their expertise and availability. Each of our customers is guaranteed technical and commercial tracking in the running and development of their coating process, our staff are always available to provide rapid assistance and advice.

SAMES KREMLIN commits to the quality and reliability of its solutions and services, such as the improvement of:

• The performance (regularity and transfer rates of the equipment, output when changing colours, etc...)

• Compliance with safety and environmental rules

• Productivity (grouped colour batches, unhooking of hangers, etc...)

Reduction of costs

• Automation of functions (detection of size, break between parts, automatic cleaning of applicators, proportional flow control, use of spray gun recipes dedicated to families of products, etc...)

- Ergonomics of work stations

COR

Range of powder equipment

THE **SAMES KREMLIN** POWDER ELECTROSTATIC RANGE IS MADE OF THREE TYPES OF APPLICATORS:

WHEN USING CORONA OR BELL ?

🔅 Corona applicator

Very versatile, the fan spray favors penetration in recesses and folds. Target distance may be a factor.

- Good penetration and wrap around
- Complex shapes
- Used for touch up
- Automatic or manual
- High Transfer Efficiency

Rotating bell applicator

Designed for coating large flat surfaces, the bell can spray all kinds of powders with a film build accuracy of +/- 5 microns.

- Wraparound effect
- Wide pattern (up to 450mm)
- High flow (>200g/min up to 500g/min)
- Homogeneous thickness (+/-10%)
- Automatic or robotic
- High transfer efficiency

Inogun M

The **Inogun M** gathers all **SAMES KREMLIN**'s knowledge and expertise to provide the best of electrostatic technology for the manual application of powder.

- Lifetime finish quality: Long life cascade durability and HV performance
- Efficient powder transfer: TEC5 technology
- Balanced and ergonomic design: No repetitive strain damage, less fatigue

Manual gun

Inogun M

DESCRIPTION

The **Inogun M** is controlled by the Inobox which has a clear and **easy to use interface**. The connected integrated Inocontroller can also be used when it is necessary to integrate an automatic booth. The **Inobox** and the **Inocontroller** are the main control centers for manual and automatic applications as it performs and controls:

- high voltage,
- current,
- electrode cleaning air,
- injection air,
- and dilution air.

Dust and energy saving has been implemented at the heart of the gun to reduce waste, and increase productivity and the quality of finishing powder.

The **Inogun M** is designed to provide the best quality powder application because it is well-balanced, supplied

with low voltage cable, powder tube and reactive trigger

The **powerful high voltage** unit coupled with the high voltage control unit provides a high wraparound effect on large parts (D. 500mm / 20 in) and has deep penetration into recessed areas. This reduces the cost of the equipment with a better powder usage rate and reduces the time to

that requires a gentle touch.

spray the powder.

Inobox allows a comfort of use for your production line, manages the programs for your campaigns of parts as well as pre-settings optimized to the shapes of the parts to be painted.

The **Inogun M** is available in different kits according to the needs of your powder coating process. The **Inogun M** can be used as a main applicator to perform powder coating and can be mounted on a **tank** or independent powder supply box on a **vibrating table**.

The **Inogun M** can be used as a **pre-touch or touch-up solution** in an automatic booth to obtain the desired coating on the workpiece. The Inogun M is also used for **non-destructive testing** applications.

PERFORMANCE

1 Outstanding comfort of use: well-balanced and comfortable handle grip

2 Quick hose powder disconnection: quick color changes and rotation for flexibility

3 Constant and stable spray for a smooth and even application

4 TEC5 technology delivers high finish quality

5 Three factory presets for quick start. 99 custom presets available to meet the most production requirements

PRODUCTIVITY

4 Advanced HV control for an excellent penetration of complex-shaped parts

- 6 Wide range of adapted nozzles for optimal application
- 7 Powerful cascade providing a strong wraparound effect
- Easy application of metallic powder
- Fast color change and cleaning
- High transfer efficiency to reduce working time

SUSTAINABILITY

- 1 Robust and sturdy design
- **5** Wear part status monitoring imbedded in the INOBOX controller
- 6 Very good abrasion resistance for nozzles
- 2+1 years warranty *

* except wearable parts, see conditions to apply on the warranty page of our web site

TEC5 TECHNOLOGY

(Transfer Electronic Control)

TEC5 technology processor will automatically adjust the voltage giving the best application. It takes into account the powder flow and distance of the parts to deliver the highest powder transfer and finish quality.

TEC5 technology is the 5th generation and is the result of 55 years of innovation, experience, and knowledge from SAMES KREMLIN. Our expertise has been used to develop two new major components which are the High Voltage unit (cascade), and the High Voltage control system (processor).

The TEC5 diagram shows the spraying distance & High Voltage as it highlights that beyond 300 to 400 mm between the powder gun and the part that is to be coated, the powder receives a very high voltage with low current; therefore, the powder doesn't get enough charge which decreases the transfer efficiency and wrap-around effect. At the opposite end of the scale, under a distance of 30 mm (red zone of the diagram) to the part to be coated, the current increases very quickly, and the control system shuts down the High Voltage and current to avoid any potential hazards.

Inocart equipment range

THE EQUIPMENT

Our **Inocart range** is designed for manual powder coating. The minimum equipment required for Inocart coating includes a pump(1), a powder hose(2), a control module (3), a spray gun(4) and a trolley(5) that integrates the various powder paint supply systems:

- Box (VT)
- Hopper (H)
- Pressure tank (HF & NDT)

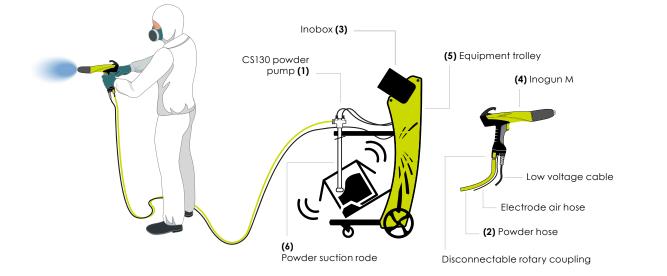

The powder pump is equipped with a suction rod(6), suitable for the vibrating table or fluidised tank trolley version.

The gun is connected to the pump by a single powder feed hose and to the Inobox control module which allows the operator to easily adjust the paint application settings:

- Powder flow
- Voltage and current for electrostatic coating
- Coating program and part campaign
- Electrode blowing air

The operator has the ability to adjust the flow rate of the powder and electrical characteristics preset voltage/ current levels from the gun.

The choice of equipment must be made according to the nature of the powder paints, the frequency of colour changes and the type of parts to be painted.

www.sames-kremlin.com

DESCRIPTION

Inocart VT is perfect for applying an even spray pattern for powders like polyester, epoxy, or acrylic which are supplied in 20 kg (44 lb) boxes. The vibrating table liquidizes the powder and allows the powder pump to move the powder swiftly through the tubing to the manual gun.

Inocart HF is designed to apply thermoplastic and anticorrosion powders. In order to obtain a thick powder layer (up to 500 μ m) in one pass, the pressure pot CSV 217 offers a usable volume of 24 liters - 6.3 US Gal (ie: a range of about 8 minutes at 1200 g/min - 42.3 Oz/min).

Inocart NDT is designed for Non-Destructive Testing processes to apply powder developer. This application process is widely used in the aerospace market. Powder is finely applied in a homogenous layer with the substrate still visible. In order to obtain film thickness, the CSV 230 pressure tank will enable the best movement of powder to the gun for the required application.

Inocart H is perfect for all types of powders, including metallic and material-filled powders. The hopper, with a capacity of 50 liters (13.2 US gallons), ensures a very stable powder spraying.

Inocart VT

Manual application systems

Inocart VT is a simple and complete manual solution for applying powder. Partnering the Inogun M spray gun and the Inobox control module enhances the user's experience. It contains a user-friendly interface with advanced ergonomic functions to help maintain the focus on the powder application and the finish

Fast color changes: Under 25 seconds to clean

The equipment meets the needs of industrial PT powder developer applications.

Inogun A range

Inogun A sprayer is designed for powder coating in general industry applications. It is generally used as a fixed position or on a reciprocator in a fast color change booth such as **Inobooth**.

Inogun A combines high application performance, easy cleaning and simplicity of use to allow you to increase your productivity and change colors more quickly and efficiently.

Available in two versions:

Inogun A

Projector equipped with an adjustable support arm. It can be easily integrated into all existing cabins or new installations.

Inogun A FCC

Dedicated spotlight for a quick color change booth. Its design assembly delivers perfect cleaning in a very short timeframe.

SPECIFICATIONS DETAIL FOR EACH EQUIPMENT

GUN	Inogun A	Inogun A FCC

26

THE EQUIPMENT

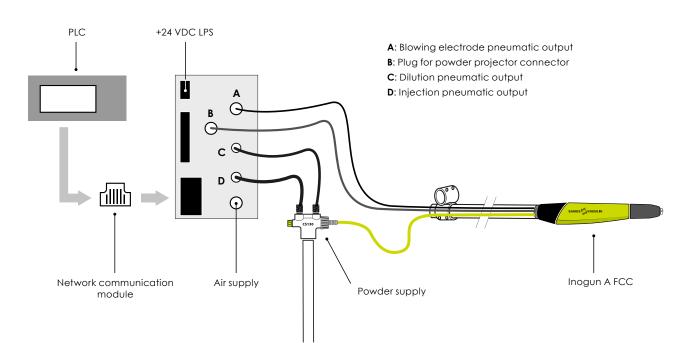

The Inocontroller is a control module for controlling the automatic Inogun A projector or the manual Inogun M spray gun.

The Inogun A projector or the Inogun M spray gun have the function of projecting the electrically charged powder by means of a high voltage unit integrated into the barrel and delivering up to 100kV and 110 µA.

The Inocontroller manages, by microcontroller, the control of the high voltage unit and 3 proportional solenoid valves. In return, a reading of the high voltage and current is performed, as well as the flow of the 3 proportional solenoid valves. The Inocontroller is controlled by a PLC network and accessible for **SAMES KREMLIN** maintenance via **USB connection**.

For instance:

Synoptic of an installation with an Inogun A FCC

www.sames-kremlin.com

DESCRIPTION

Automatic applicators are used for applying powder to large batches to obtain high transfer efficiency with optimum finish quality.

The automatic spray gun is available in two models:

Inogun A

Equipped with a support arm (metal bar) onto which the Inogun-A is attached: it can be changed or fitted quickly and easily to all existing booths. In this version, the assembly may also be fitted onto new installations.

Inogun A FCC

This version is dedicated to quick color change booth. Its profiled assembly means that it may be cleaned perfectly in a very short time. The rear casing of the spray gun is screwed onto the support arm. This diameter is constant along the entire length. It provides the most efficient color change. The tubular arm is also used to channel the hoses and the electrical connections directly and tidily to the rear of the sprayer.

Inogun A – Inogun A FCC

The Inogun A or Inogun A FCC sprayer gather all SAMES KREMLIN's knowledge and expertise to provide the best electrostatic technology for the application of powder in automatic booths.

- Lifetime finish quality: Long life cascade durability and HV performance
- Efficient powder transfer: TEC5 technology
- Reduced downtime: Quick gun change in less than 1 minute

THE EQUIPMENT

The **INOBELL** sprayer is equipped with a mechanical bearing turbine. It may have a fixed mounting due to its large impact or on a reciprocator.

This sprayer is piloted by the **TCR** module module (1). It manages the rotation speed of the turbine used to spray powder coatings at all times on the digital display on the front face. This module is equipped with a grounded cable, a plug for local command and two connections (2) to control the spray gun and a sensor to measure the speed of rotation.

The powder supply is made thanks to a CS130 powder pump (3).

The powder is brought to high voltage by contact with the bell cup through an integrated high voltage unit into the sprayer. The low voltage is supplied through a specific cable (2) connected inside the INOBELL.

CONTROL MODULE THAT CONTROLS EVERYTHING

- accessible and user friendly,
- adjustment of all functions on screen,
- simplified adjustment of powder flow rates,
- adjustment of air shroud (variable impact),
- turbine rotation is pre-set and controlled,
- 9 spray presets,
- 2 operating modes available: - local mode (screen and/or piloting by wire

connected triggers),

- remote mode (monitoring via a series connection),

- simplified wiring between the module and the sprayer

www.sames-kremlin.com

• storing of parameters,

• clear and visible user interface,

- Complete unit ready to integrate,

- No work required on the software,

- Standard size 19'' - 2U,

• easy to wire in,

• easier to integrate:

Powder Systems

Inobell

PERFORMANCE

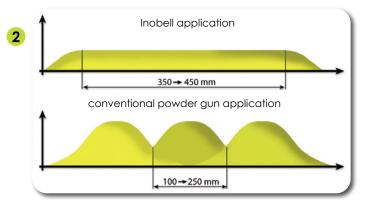

1 Adjustable air shroud: Allows a rapid and marked variation in cloud size. Control of the jet can adjust the width of the cloud being implemented, proportionally

2 Excellent regularity of film build-up:

The quality of finish meets the most stringent and tight D.O.I. (Distinctiveness of image).

• Speed detection for increased application control

PRODUCTIVITY

SUSTAINABILITY

Inogun R / RC / RD

The Inogun robotic applicators are examples of SAMES KREMLIN's knowledge and expertise for providing the best electrostatic technology for robotic powder applications.

- Lifetime finish quality: Long life cascade durability and HV performance
- Efficient powder transfer: TEC5 technology
- Reduced downtime: Quick gun change in less than 1 minute

34

Electrostatic Powder Coating

Robotic application systems

DESCRIPTION

The Inogun robotic applicator built with a common base are thoroughly tested for robotic powder applications.

We are providing 3 different versions of the applicator and they are fitted with a different robot bracket: Inogun R for a single gun,

Inogun RD for parallel guns,

Inogun RC for convergent guns.

Inogun R / RC / RD

ADAPTATION TO INDUSTRIAL CONSTRAINTS

- · Respond to the evolution of PRODUCTION CAPACITY and application constraints
- Master FINISHING QUALITY of your products through precise and controlled trajectory
- Maximize your productivity GAINS combining robotics and COATING application with electrostatic powder bell
- Improve COMPETITIVENESS of your business and access to **NEW MARKETS**

Integrator Kit Inobell R

- Powder Systems
- ools & Accessories

• An economy of paint (the transfer efficiency is high, and can reach over 80%) thanks to the high transfer charge. The precise control of the coating thickness is made possible by the powder bell powder is economised.

New removable turbine cartridae:

Integrated & variable shaping air (proportional adjustment on TCR module),

- Removable powder bell cup,
- Improved bearing protection,
- Improved motor efficiency.
- Flexible air shroud:

This enables a fast and marked variation of the size of impact. Controlling the pattern allows the width of the impact to be proportionally adjusted during application (from 300 to 450 mm).

- New speed measuring system:
- Greater precision in the application of the paint.

ADVANTAGES OF THE ROTATING BELL

The powder is supplied via the central tube and is rotated by the bell cup. It is electrically charged when it leaves the bell and heads towards the object to be coated in a very wide and enveloping spray. The powder is both electrically charged and sprayed by this flat shaped bell, that rotates at high speed. The bell itself acts as an electrode by bombarding the powder particles with ions, thus providing the powder with a high electrical charge.

The rotary bell cup associated to the high voltage ensures: • A high level of productivity (paint flow of over 500g/min).

- Homogeneous coating.
- An adjustable spray paint pattern.

• A maximum coverage of parts to be paint (the electrostatic wrap round effect permits a transfer of paint behind the part).

TECHNOLOGICAL INNOVATIONS

• Integrated high voltage unit (UHT165) No high voltage cable:

- Less maintenance,
- Easy to install,
- Staff safety.

- Simplified design:
- Compact and ergonomic system,
- Access and wiring improved,
- Equipment simple to install,
- Number of parts reduced.

Control systems

The INORECIP V reciprocator is the best choice for monitoring automatic spray guns and bells in powder coating automatic installations. It features a vertical and horizontal Movement System.

- Simple and rugged construction
- Very long service life
- Reduced maintenance

DESIGNED FOR FLEXIBLE INTEGRATION AND PROCESS EVOLUTION

PERFORMANCE

• Stroke and speed adjustable remotely over a very wide range.

• No special prepared area required (the reciprocator can be positioned or moved manually without effort).

PRODUCTIVITY

• Extremely simple construction and operation (very long service life).

• Smooth inversion movement for a better coating quality Sustainability

Inomotion Inorecip V & H

CE

Inorecip V & H is classified as category 3 according to the ATEX 2014/34/EU directive and is designed for a For Inorecip H, the front part is implanted in zone 22 and the rear part is out of zone.

SUSTAINABILITY

• Optimum safety - CE approved.

• Reduced maintenance - limited to cleaning the belt and transmission devices.

- Designed for industrial use
- Built with proven and high-quality components

Inorecip

THE EQUIPMENT

The Inorecip V reciprocator is designed to equip automatic powder coating installations.

It is composed of a mechanism controlled by an Inomotion control module placed in an electrica cabinet.

It allows to drive, with a vertical reciprocating movement, powder projectors, for example:

- 12 Inogun A powder projectors,
- 4 Inobell powder projectors.

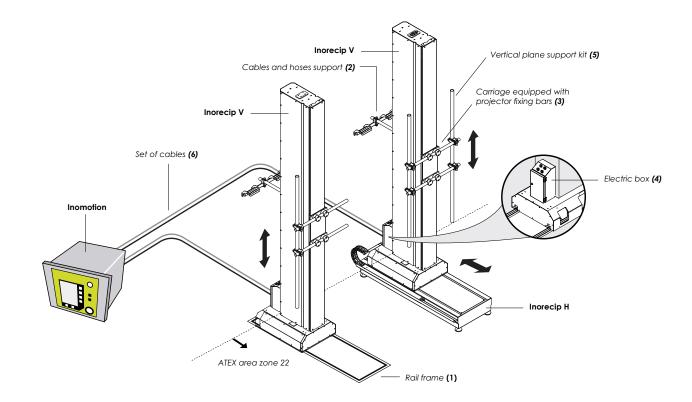

The **Inomotion** control module allows to remotely control the vertical reciprocating mechanism of the Inorecip V and the horizontal positioning of the Inorecip H (option). It is connected by power and control cables to the box located at the rear of the Inorecip V.

Inorecip H (option)

The In and Out carriage Inorecip H is an unit placed under the Inorecip V reciprocator giving it the possibility to move along a second horizontal axis.

The Inorecip H allows to keep a constant coating distance whatever the width of the parts. It is controlled via the Inomotion control module, which receives information from the part width detection system.

This second axis is also often used for the automatic cleaning mode of the projectors.

MECHANISM OF THE ROBOT «INORECIP»

Description	Effective stroke (cm)	Part Number		
	180	130002072-180AT

Catalogue V2.0

SYNOPTIC INSTALLATION OF INOMASTER SYSTEM

Inoprofile is a new concept which allows the powder projectors to be sprayed and adjusted around the external profile of the part to be painted automatically. The Projectors move independently of each other which makes the coating modular and ensures deep penetration into recessed areas.

THE BIG ADVANTAGES ARE:

Less manual operations in the pre-touch up and touch-up areas, Part profile monitoring, No additional technical skills for operators or handling of projectors, Low cost installation on production line with little space requirement,

FUNCTIONING PRINCIPLE:

The part to be painted is scanned with two 3D shape sensors at the entrance to the powder coating booth of the production line. Then the projectors are positioned automatically according to the shape and size of the part to be painted detected.

www.sames-kremlin.com

Step 1 : The part is scanned with two 3D shape sensors when entering in the spray booth.

Step 2 : The part profile is measured

Step 3: Real time self positioning adjustment of each gun when spraying.

Control systems

Inomaster

The Inomaster cabinet is intended to supply and control a powder coating installation in a ventilated booth.

The Inomaster cabinet manages the following functions:

• It is designed to install up to 8 Inobox control modules and one Inomotion control module (option).

• Auxiliary pneumatic power supply (with powder tank for example).

• Monitoring of low powder level in the tank.

THE EQUIPMENT

The standard Inomaster cabinet, used in conjunction with its various modules, controls the following functions:

• the installation of 19» standard control racks (not included).

- a power supply module (1)
- a Inogun cleaning control module (2)
- a Inomotion control module option (3)
- up to 8 Inobox control modules option (4)
- a pneumatic supply kit

The module (1) is installed at the top of the Inomaster cabinet above the modules. It is fixed in the cabinet by four screws. This module (P/N: 900002782) is rackable 19 inches and 3U high.

This module (2) is installed below the power supply module and above the Inobox modules. It is fixed in the cabinet with four screws. It allows the control of the cleaning of the Inogun projectors.

The Inomotion control module (3) allows remote control of the Inorecip V reciprocator. It is connected by power and control cables to the cabinet at the rear of the Inorecip V.

CUSTOMERS' BENEFITS

• Design without retention for optimal color changes.

Strength of the body thanks to the clamping, no deformation.

• Easy to use, quick maintenance and no special tools required.

• Access to the ejector without removing the tip of the powder hose.

• Quick air coupling connectors with color-coding and keyed connection.

- Metal body and injector allowing solvent rinsing.
- The conductive output tip improves the evacuation of the triboelectric charges that may be generated.
- Quick clamping system with a uniform distribution regardless of the number of powder pumps.

Inotransfer

The Inotransfer powder transfer pump is designed for the transport of powder paint, ideally for an automatic powder coating plant, to supply new powder to a fluidized bed tank (eg: powder feed center). It can also be used for the evacuation of recycled powder, such as hopper bottom, tank bottom, etc...

- High transport rate = 300 kg/h
- Long distance transport = 25 m
- Low air consumption
- Integrated cleaning function
- Easily handled using the trolley

TECHNICAL DATA

(*): The powder flow rate measurements are given as an indication because they depend on several parameters, suction distance, output distance, density of the powder put in motion, height difference, container, etc... Flow rate (4 m suction, 6 m output, 1m height difference) 5.5 Kg/min.

Inotransfer

DESCRIPTION

For optimum efficiency, the Inotransfer transfer pump must be installed as close as possible to the container to be drawn from and out of the explosive area. The pump must be installed vertically and the circulation of the powder must be from top to bottom. Select the operating mode (blowing or pumping) with switchs on **control module (1)**. Prior to start-up the **Inotransfer (2)**, the drawing **rod (3**) must be connected to the transfer pump by a transport hose of a length defined by the user. The suction is done from the top of the pump, the delivery is done in the lower part.

Control Solutions & Peripherals

Inotank – Inosieve – Vibrating table

The tank range Inotank has also been completely renewed. New high end materials, more flexibility with different capacities will match all needs, for laboratories, or medium size automatic solutions.

Powder feed systems come in three categories:

TANK

Each Inotank is made up of:

- A bottom equipped with a porous fluidization plate.
- A body fixed on the bottom either by means of snap fasteners or collars.
- A cover supporting the plungers, from 1 to 20 according to the model.
- A filling trap allowing to control the powder level for the 50L, 100L and 150L versions.

As an **option**, the 100 I and 150 I tank versions can be equipped with a powder level sensor:

- A low level of powder to prevent missing powder.
- A high level that allows to control the filling when it is managed automatically via a transfer pump.

Inotank 8 L. = 1 pump Inotank 50 L. = 2 pumps Inotank 100 L. = 12 pumps Inotank 150 L. = 20 pumps

SIEVING UNITS

Each **Inosieve** is designed on the basis of the **Inotank** in 100 L and 150 L versions and completed by a sieving set composed of:

- A bottom equipped with a porous fluidization plate.
- A body fixed on the bottom either by means of snap fasteners.
- A cover supporting the plungers, from 12 to 20 according to the model and a sieve body

• A sieve body equipped with an electric vibrator and a 250 micron sieve mounted on silent blocks.

- A filling trap allowing to control the powder level.
- A minicyclone to select recycled and new powder.

As an **option**, these Inosieve can be equipped with a powder level sensor:

• A low level of powder to prevent missing powder.

• A high level that allows to control the filling when it is manageautomatically via a transfer pump.

Inosieve 100 L + sieve 250 microns Inosieve 150 L + sieve 250 microns

VIBRATING TABLE

The vibrating tables allow to support containers of new powder intended to **continuously** feed distribution tanks (or Inosieve or powder feed central).

The containers, 20 kg boxes or 200 L barrel depending on the model, are vibrated in order to facilitate the flow of the powder during the pumping phase.

And another version of a vibrating table allowing to receive boxes of 20 kg with a powder suction rode equipped for use directly towards a powder projector (eg: Inogun A)

Vibrating table	for 20 kg box	910029985 (2)
	for 200 L. barrel	910031737

(1): vibrating table used for feeding powder to a sprayer, a suction rod is equipped
 (2): vibrating table used for dispensing powder to another destination (eg: new powder feed for a powder feed central)

OPTION

Description	Model of sensors	Part Number
Sensor support kit	Low	910031503
	High	910031502

The detection sensors provide information on the powder level in the tank and are compatible with the Instank and Inosieve systems. In the case of automatic filling, provide the 2 models of sensors: • high level to detect maximum filling • low level to detect when the tank is empty

Powder systems

Engineering solutions

SAMES KREMLIN develops its engineering solutions closely with their customers in order to meet their specific requirements:

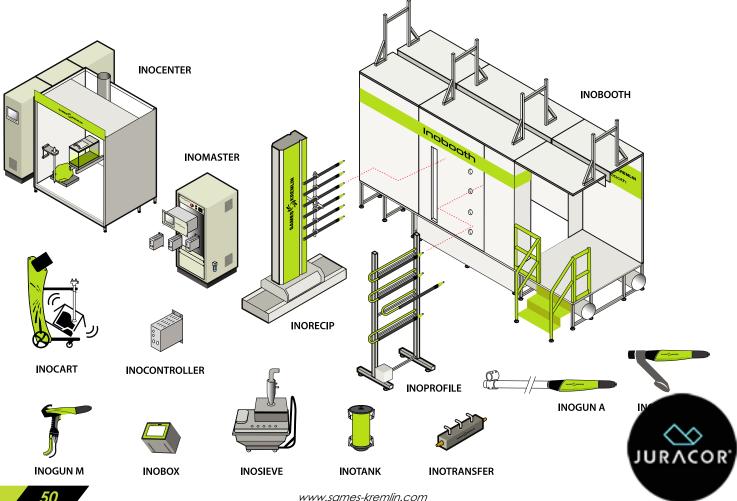

Designed and developed for each individual case, they provide precise responses to the expectations of the most demanding users: reliability, quality of application and improvement of productivity are constantly aimed for.

Quality, reliability, productivity and customer's care is what SAMES KREMLIN is deeply committed to.

SAMES KREMLIN offers a complete new **INOCOAT range** to meet all powder coating application solutions.

Powder coating booths are the synthesis of technical solutions well suited to automatic spraying.

We offer simple or modular solutions according to your requirements. This choice will be made according to your needs in terms of production rate, type of parts to be painted, frequency of color changes and number of colors required.

SAMES KREMLIN offers a **wide range** of automatic powder coating **system**:

INOBOOTH

FOR RANDOM PRODUCTION & MANY COLOR CHANGES:

• Dedicated for quick color change installations

• Modular design, assembly carried out without welding: quick installation, no skill required for welding

- Booth is small:
- quick cleaning from outside
- 100% automatic application
- Option of a platform for pre-
- touching or manual retouching on 1 side of the conveyor
- Compatible with the new Inoprofile system

PVV EasyCompact

FOR INTEGRATED PRODUCTION & INTENSIVE TOUCH-UP:

• Dedicated to meet the application of complex parts

- Booth is compact:
- quick cleaning from outside2 separated areas:
- Automatic & Manual
 Flat floor for 2 manuals areas:
- side protection fences
- Separated air flow between manual and automatic areas

PVV EasyColor

FOR INTEGRATED PRODUCTION & EASY PARTS:

- Dedicated to large parts to be painted
- Compatible with the use of a multiaxis robot
- Booth is modular:
- Designed to meet customer needs
 Access door for manual coating
- on simple parts
- Flat floor with hopper
- Very wide pieces
- Compatible for floor or overhead conveyor
- 100% automatic application and/or 1 pre-touch or 1 touch-up

Powder Systems

fools & Accessories

Booths range incorporates many shared features:

1 - BOOTH MADE FROM COMPOSITE MATERIALS

- Honeycomb structure,
- No powder build-up on walls and the bottom of the booth,
- Vertical downflow with low velocities in the paint application area for improved transfer efficiency,

• High air speeds at the level of the booth entrance and exit silhouettes to limit powder discharge outside the boot,

• Easy cleaning using compressed air,

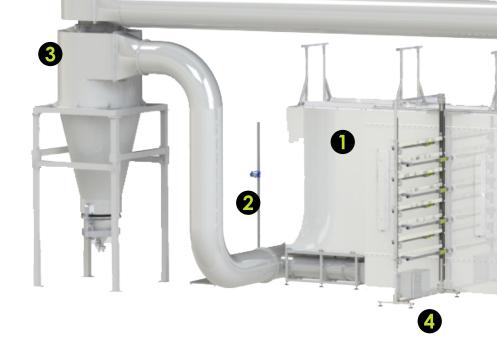

• INOBOOTH : Blowing floor for continuous recirculation of recycled powder, saving time for color changes,

• The part to be painted is scanned with two 3D shape sensors

- Optimization of gun triggers
- Adapt distance between gun and part
- High levels of application process automation
- New solutions for powdering complex objects
- Optimized coating quality and powder savings and reduced overspray

3 - CYCLONE WITH FILTER

- The cyclone/sieve set allows the recovery of powder overspray.
- High efficiency
- Continuous sleeve valve recycling
- Sieve to recover the powder:

Very efficient and durable, the perforated plate is fitted between the base of the cyclone and the sieve.

4 - QUICK COLOR CHANGE

- A compressed air network automatically cleans :
 - Powder hoses to the sprayer
 - Sprayers bodies
 - Cyclone & sieve
 - Recycled powder circuit
- Lead from main control panel
- Between 10 and 15 minutes on average

5 - CENTRAL CONTROL PANEL

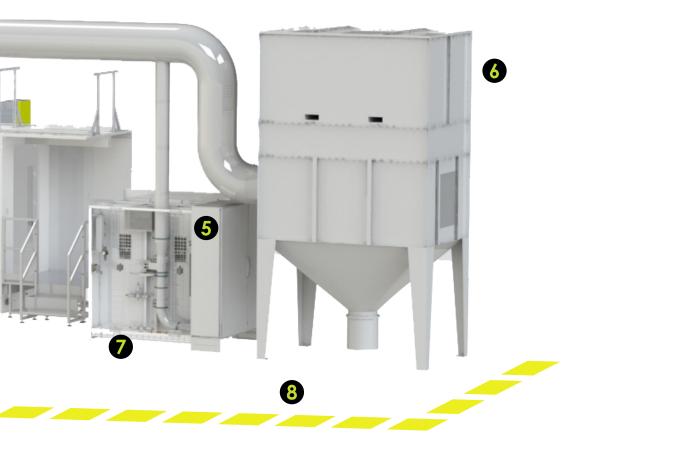

- Large touch screen for controlling the installation,
- Total production management,
- Preventive maintenance management,
- Assistance with the cleaning procedure,

• Profinet communication network between the different devices (reciprocator, detection, projector module, PLC), • Optional modem for remote connection and assistance.

6 - FILTER GROUP

It controls the quality of the air expelled either inside or outside of the workshop as required.

Its anti-clogging control system checks the water column permanently. This method preserves good speeds inside the powder coating chamber, whilst ensuring long life for the filter cartridges.

7 - POWDER FEED CENTER

- Feeding up to 24 pumps,
- Quality of the color change, 99% powder reclaimed for powder savinas,

• The same Inocenter fits all types of powder containers from 20 to 1000 kg production needs, from small batches to large campaigns,

• Automatic pump & hoses cleaning,

• Complete color change in 10 minutes: fast color change, small batch work,

• Possible retrofit on existing line,

• Reduced maintenance = no filter cartridge in the central unit and recovery of the powder lost in the general group.

8 - MODULAR DESIGN TO ANSWER ALL NEEDS

- Variable lengths and heights of our booth models (EasyCompact, EasyColor and Inobooth),
- Number of sprayers and ventilation are sized depending on project,

 Modular design, adaptive to production needs and increase.

Engineering solutions

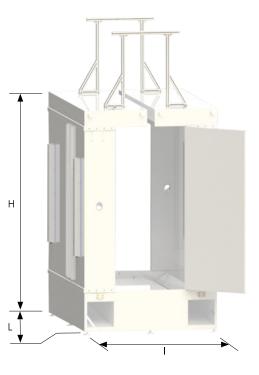

Systems of powder installation

Allows your customers to increase their productivity by modernizing their automatic powder installation. All elements which compose our different powder coating booths are independently available. You will be able to integrate them on your customer's existing line or on brand new lines.

1 - BOOTH MADE FROM COMPOSITE MATERIALS

1 need => 1 suitable model The range of powder coating booths meets a wide demand for the dimensions of parts to be painted.

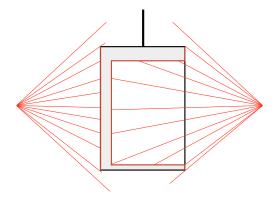

Booth		Easyco	ompact	EasyColor	Inobooth	
dimensions		Standard	Large	EusyColor	moboom	
Hoight H (mm)	Maxi.	4000	4000	4000	2500 -> 4000	
Height H (mm)	Mini.	2500	2500	2500	2500 -> 4000	
Length L (mm)	Maxi.	3850	4450	6000	2500	
	Mini.	-	-	3000	2300	
Width I (mm)	Maxi.	1700	2100	2500	2200	
	Mini.	-	-	1200	1700	

2 - PARTS DETECTION

Detection of parts to be painted by 3D laser scanner allowing shape recognition.

Parts sizes		EasyCompact & Inobooth	EasyColor
may Width (mm)	Standard	800	-
max. Width (mm)	Large	1200	1600
max. height (mm)		2500	3000

3 - EXTRACTION CYCLONE

Air/powder separator thanks to the centrifugal force ensuring a high recycling yield.

The cyclone/sieve set allows the recovery of powder overspray.

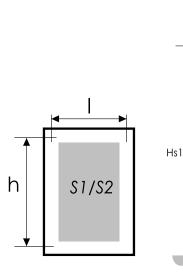

The recycling system (sleeve valves) ensures the powder transfer from the sieve to the powder center.

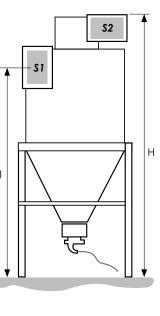

A perforated plate makes it possible to «break» the speed of arrival of the powder on the sieve and thus to prolong the life of the latter.

This determines the output of the installation.

Its form and diameter are calibrated to suit the context of the installation to guarantee very good separation performances. The built in sieving system is patented and combines fine filtration and high flow rate.

TECHNICAL DATA OF CYCLONES:

	Air flow (m ³ /h)						
	9000	12 000	16 000	20 000	24 000	28 000	32 000

Engineering solutions

4 - SPRAYERS BLOWING

When changing over colors, the Inogun A-FCC or Inobell can be cleaned easily, automatically and quickly with an airblowing system.

The use of an **Inorecip V** reciprocator on the horizontal axis (forward and backward) allowing cleaning, is possible with the **Inorecip H** option (refer to the Inorecip chapter on page 38).

Inoprofile solution is also equipped with a dedicated nozzle for guns cleaning optimization.

The automatic cleaning system is then controlled either by the Inomotion control module for a standard installation or with our new HMI interface from a PLC controller for Inomaster Platinium type installations.

5 - CENTRAL CONTROL PANEL

Installation control HMI (Inomaster Platinum)

- Large touch screen for controlling the installation
- 4 operating modes
- Profinet communication network between the different devices (reciprocator, detection, projector control modules, PLC)

- Production management page to allow preventive maintenance

- Assistance with the cleaning procedure
- Optional modem for connection and remote assistance

6 - FILTER GROUP

Ventilation boxes with compressed-air automatic cleaning, are especially designed for filtration and separation of powder paint. They guarantee a highly effective filtering.

Air flow provided by the filter box is comprised between 10 000 m3/h and 22 000 m3/h (to choose according to dimensions of the booth openings and the quantity of projected powder).

The filters are delivered in 3 sub-assemblies: fan block + filter block + hopper

GROUPS OF FILTRATION DATA:

		Air flow (m³/h)				
	10 000	12 000	16 000	20 000	22 000

7 - POWDER FEED CENTER

5

The INOCENTER is a fast color change powder center, with a low capacity fluidized hopper feeding up to 24 guns, ideal for small batches work.

- · Complete color change in 10 minutes: fast color change, small batch work.
- Quality of the color change, 99% powder recovered: more powder savings.
- Modular design: adaptive to production needs and increase.

Without filter cartridge, there is almost no maintenance

Designed for an easy and flexible integration with the rest

Powder and energy savings have been placed at the heart

of the Inocenter development to reduce waste emission,

enhancing productivity and finish quality of the coating.

Should it be used in an advanced powder process or in

a very simple and performing powder booth, it is ideally controlled by a single panel equipped with a very friendly

operation, reducing downtime and running costs.

- 1 Powder pump
- 2 Powder tank,

1 2

3 - Vibrating table,

of the INOCOAT

- 4 New powder supply plunger
- 5 HMI (Human Machine Interface)

The Inocenter powder station is a ventilated powder dispensing enclosure allowing:

3

- Powder supply to projectors and guns (24 maximum).
- Automatic cleaning of:
 - powder pumps,
 - powder supply hoses,
 - the inside of projectors and guns,
 - powder recycling hose.
 - powder tank.

ATEX zones to consider

According to 1999/92/EC Directive, the ATEX zones' definition is the responsability of the user. For information, here is an installation diagram in accordance with EN16985 standard booth system, contact **SAMES KREMLIN** for more information.

Zones are defined as follows:

1- POWDER BOOTH:

Zone 22 for the inner volume of the booth + **1 meter** around all openings. **Zone 22** inside the cabin ventilation duct

2 -POWDER FEED CENTER:

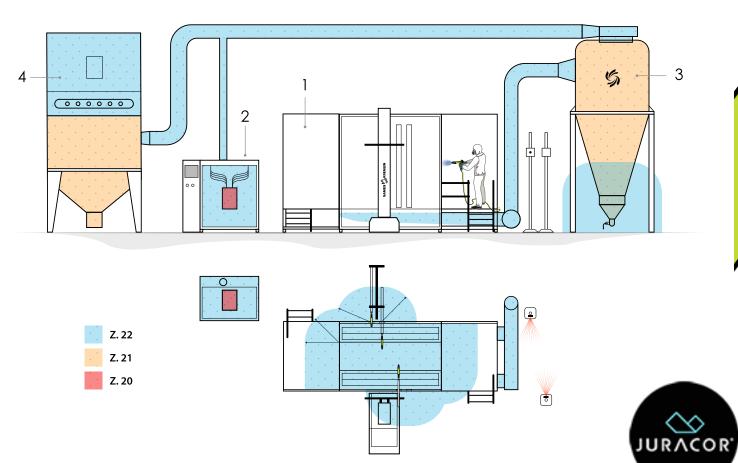

Zone 22 for the inner volume of the feed center Zone 20 for the inside of the tank

3- CYCLONE AND LINES:

Zone 22 outside the cyclone 1 meter from the hopperZone 22 inside the pipe between the booth and the cycloneZone 21 inside the cyclone and the hopper

4 - FILTER GROUP AND LINES:

Zone 22 between the cartridge and the fan motor **Zone 21** in the filtering part with the cartridges

Tools & Accessories

Powder systems

Inobooth

Productivity, compactness, ergonomics are the key words that sum up the current requirements of the surface treatment industry.

To meet these criteria and satisfy the most demanding customers, Sames Kremlin has developed Inobooth.

An automatic powder application solution designed around the booth and complementary to the Easycompact and Easycolor booths, all dedicated for quick color change installations.

Modular in design, the assembly is carried out without welding and does not involve specific skills or equipment for on-site welding.

The composite structure reduces powder retention on the side panels and roof, for a quick and pollution-free color change.

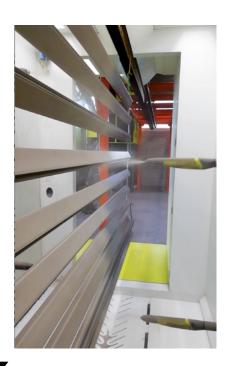

The background is continuously blown during the application phases for a regular supply of recycled powder and a saving in color change time.

Reduced air speeds in the automatic application area to maximize application yield, and high air speeds at the entry/exit silhouettes to limit powder outflow.

This cabin can be used for a 100% automatic application, equipped either with Inorecip, or with our Inoprofile solution, or mixed with Inogun A FCC and/ or Inobell.

It can be optionally equipped with an operator platform for the pre-touches upstream of the automatic structure, and/or at the exit for manual touch-ups.

FOR RANDOM PRODUCTION & MANY COLOR CHANGES

Optimise your paint line and your production !

EasyCompact can be integrated quickly and easily into new or existing installations; its compact size means that it may be commissioned very quickly.

Its performances for changing over colors will increase your coating productivity significantly, as well as that of the rest of your production, provided that the stages prior to the booth (assembly of parts, surface treatment) and after the booth (hoven) allow it!

The booth gives access to 2 manual rework stations, either BEFORE OR AFTER the automatic station.

Changing over colors becomes quick and easy. The booth is cleaned from the outside, there is no need to go inside it once the manual and double doors have been closed.

PVV EasyCompact

FOR INTEGRATED PRODUCTION & INTENSIVE TOUCH-UP

The air flow passes under the floor along the length of the booth through a central opening. This design permits a homogeneous flow inside the booth that satisfies the application and cleaning criteria.

The design of the booth, thanks to its flat floor in the manual zone and the internal separation deflectors, permits the operator to enter sufficiently inside the booth for more ergonomic and cleaner use in production. These deflectors are covered by a patent by **SAMES KREMLIN**, and can be oriented to facilitate cleaning from the outside of the booth.

The two manual powder coating stations and the output area are equipped with swing doors and permit, when closed, a reduction of the opened surfaces of the booth and therefore to increase the air speeds to limit the powder outputs during cleaning operations.

Powder systems

PVV EasyColor

The PVV Easycolor booth is fully modular and great flexibility.

Its composite structure allows colors to be changed over very quickly (10 to 15 min). The PVV Easycolor system ensures a finish that meets your expectations for industrial requirements.

- Manual and ventilated access to work stations
- Vertical ventilation
- Automatic cleaning function using a pressurised air system that carries out the cleaning:
 - venturi feed pumps.
 - powder hoses and inside of sprayers.
 - a reclaim powder hose.
- The external cleaning of the sprayers is carried out inside the booth
- Flat base that facilitates access for cleaning and maintenance operations
- The central powder supply unit Inocenter is fully automated
- The control cabinet Inomaster Platinum equipped with a color touch screen
- Cyclone with integral sieve and filter preventing the powder from polymerisation

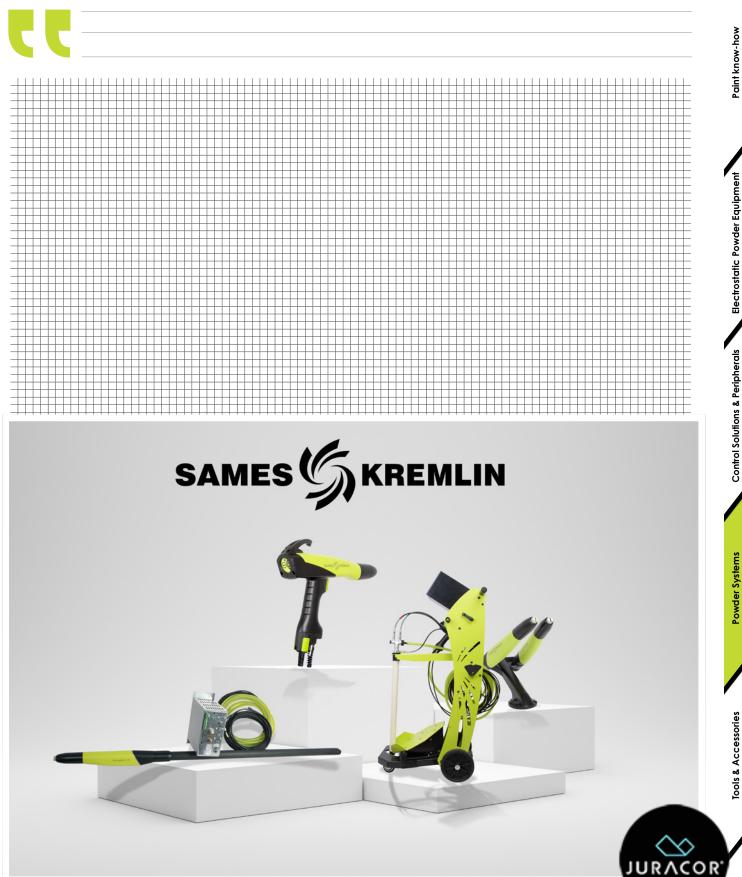

FOR INTEGRATED PRODUCTION & EASY PARTS

Electrostatic Powder Coating

Powder systems

Measuring device High voltage probe

- EASY TO READ DISPLAY: 4 1/2" digit display
- PORTABLE: Protected by a foam lined aluminum case
- FACTORY CALIBRATED: HVP500 is calibrated to NIST standards

HVP500 is a precision high voltage probe designed to measure DC voltages up to 100 KV.

HVP500 consists of a removable probe containing high voltage resistors and a 4 1/2" digit display.

The probe resistors are very high resistance to minimize loading of the high voltage being measured.

The removable probe screws into the hand-held base and comes with 2 removable ips - including a ball and a cone.

This portable hand-held unit comes in a foam lined aluminum case that is lockable.

64

AS100

Powder fluidity measuring equipment

- Instant and accurate result
- Easy and ready to use
- Reference equipment for powder development laboratories

PERFORMANCE

• Accurate and quick measurement of the fluidity and of the ability of the powder to be fluidized

Compact

PRODUCTIVITY

- Helps determine the powder spraying parameters
- Quality management of powder batches

SUSTAINABILITY

• Easy to clean

• Saves time for the comissioning of new powder paint facilities and/or new colors in the process

USE

The powder is placed in suspension in the porous-bottomed cylinder, by means of a controlled air flow. Successively the height of fluidised powder bed is measured, in the fluidised state (H1), then the height at rest (H0) and the weight (P) of the fluidised powder that flows 30 s through the calibrated opening. It is thus possible to define a "projectability" factor, a characteristic of the powder:

$R = P \times (H1 / H0)$

For information, for epoxy powders with a density between 1.3 and 1.6, experience shows that results in function of R are as follows:

Rating
Very good
Good
limited
Poor

The AS100 fluidimeter demonstrates this behaviour and indicates immediately whether a powder is suitable for spraying purposes. It is a valuable aid in product quality control for both powder paint manufacturers and other laboratories. This is the first electrostatic powder coating apparatus to be covered by a registered French standard (T 30 A doc 396).

Tools & Accessories

Operators accessories

Size "S" to "XXL". Grey. Extremely sturdy, recommended for liquid paint. Contamination limited, reduced risk of electrostatic charge accumulation.

Meets European standard EN-149-2001, class FFP2. Provides protection only from wearer from mechanically and hermally produced particulates. May be used to protect against concentrations up to 10 times the Average Exposure Value (AEV), Belgium upper limit (VLB).

Complies with European standard EN 405:2001. Protection against most vapours/gases and particles such as: • Inorganic vapours and acid gas, up to 1000 ppm or 10 x VME/VLB, taking the lowest of the 2.

Particles up to 50 x VME/VLB

Operators accessories

GLOVES - NITRILE RUBBER (ONE SIZE)

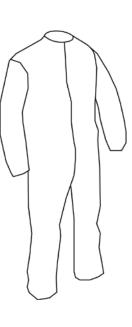

Provide protection against numerous chemicals such as alcohols, aromatic and chlorinated solvents (within the provisions of the chemical resistance chart). Complies with European 89/686/CEE Directive.

LIGHT PROTECTION COVERALL (ONE SIZE)

Woven paper overall very sturdy. The use of overalls is recommended to protect against micro-particles, splashing and spray dust, depending on the degree of toxicity of the products and working conditions. Complies with European EN 13982/1 and EN 13034 standards. Certified types 5 and 6.

Bond | Protect | Beautify

With our manual guns, automatic and robotic applicators, supplied by our wide range of pumps & machines for fluid handling, dosing, mixing & dispensing. **SAMES KREMLIN** provides industrial solutions for production increase, quality improvement, material & cost savings.

We are designers and manufacturers of process equipment that is divided into 6 ranges:

Airspray: Since1925, we have been an Airspray manufacturer bringing you the very best in finishing.

Airmix[®]: Creator of Airmix[®] Technology since 1975, we provide the perfect mix between quality and productivity.

Airless®: We provide premium Airless Products for finishers with demanding applications. **High Viscosity:** Pumping beyond possible, dispensing precisely.

Electrostatic: expertise for high finishing quality & efficiency.

Powder: Powder coating solutions for the highest Productivity since 1960.
